

	Question	Response
1	All of the IWCS' we have made over the past few years used a 10" zipper vice the 8.5" currently called out. If in fact we did switch to the 8.5", then the zipper thong currently called out would not fit.	Paragraph 3.4.2.3, Slide Fasteners, is corrected to reflect a 10" zipper, vice 8 ½," to fit the government pattern. Slide fastener size has been changed from 3 to 5.
2	6.8 Size Abbreviation (on page 33) (referred to under the size label portion of the spec 3.4.3.2) shows Medium Regular as "Med Reg", but the example on page 38 and in Amendment 2 shows Medium Regular denoted as "MR" and the size schedule (1.2.1 on page 1) shows "Medium Regular". Which should it be?	Paragraph 6.8, Size Abbreviations, has been updated to reflect correct abbreviations. Abbreviations are to be as noted in Figure 4 (page 38) of the Purchase Description.
3	Is the response date being delayed on the IWCS - R-1021?	No, the response date is not delayed.
4	In regards with section L.3.3 and the requirement for Past Performance Questionnaires, our customer, DLA Troop Support, does not provide these questionnaires; however we can provide the CPARS for the DLA contracts we are planning to use as past performance. Please confirm if we can submit the CPARS with our proposal, instead of the past performance questionnaires.	As the Past Performance Questionnaire survey (Attachment J4 to the RFP) incorporates CPARS ratings, an offeror may submit a CPARS Contractor Performance Assessment Report in lieu of the questionnaire. However, with its submission, an offeror should provide up-to-date contact information for the respective CPARS respondent in the event that this individual needs to be contacted by the Government IWCS Past Performance evaluator(s).
5	Amendment 2 to the IWCS spec adds thread for the button attachment, Nylon A-A-59826, but it does not specify a type or size. I am able to get Type II, Tex 45 of A-A-59826 from our supplier. Will this be acceptable?	Yes
6	3.3.2.1.1 Basic material, stretch woven. The basic material for construction of the torso, collar and elbow backing shall consist of a flame resistant (FR) rayon/para-aramid/nylon/spandex blend conforming to TenCate style Defender M Stretch or equal (see 6.7 for suggested source of supply). The weave shall be twill. Fabric shall be printed with the appropriate camouflage pattern (as specified in the solicitation) and conform to the requirements as specified Table 1. As an alternative, stretch woven fabric rejected for shade may be used for the elbow backing.	The PD has been updated, the statement, "As an alternative, stretch woven fabric rejected for shade may be used for the elbow backing." has been deleted as well as the word "backing" after elbow in first sentence of 3.3.2.1.1.

	<p>And in Table IX it shows it from the laminate fabric TABLE IX. List of Pattern Parts – First Quality. Laminate Elbow Patch IWCS_ELBOW_PATCH 2</p> <p>Please advise.</p>
